

Clean, Consistent Real-Time Data

RESULTS

- In-house SCADA was preventing getting consistently clean data
- Several different roles needed to see the data with different reports
- The Zedi platform brought all the right data to the right people
- Enabled more focus on actual production

APPLICATION

Emerson's Zedi Cloud SCADA Solutions platform

CUSTOMER

Junior Sized South Texas Oil Production Company

CHALLENGE

A Junior sized production company with 42 South Texas wells had serious problems getting accurate production data from their existing in-house SCADA system.

There was no unified method of collecting, managing and reporting their data, and personnel were spending far too many extra hours tracking down and sorting through all the data they did have to try and make sense of any of it.

They realized having the in-house SCADA system wasn't really helping them at all and contacted Emerson's Zedi Cloud SCADA Solutions to help them get the data they so urgently needed.

“The day I realized just how much time was being wasted by so many people just trying to ‘get’ to the right answers in the many piles of different data we had was when I’d had enough and made the call and thankfully, I’ve never looked back!”

Junior Sized South Texas Production Company
- Vice President of Operations

SOLUTION

Setting the company up on our platform was fast and painless for the customer. We've worked with several companies that use multiple methods of gathering data.

Part of the relief is when they are no longer presented with useless data, but consistently clean, accurate decision making data that's easy to understand and use in real business decisions, every day.

Now the company is getting the data they need daily that is clean, consistent, and in real-time data on current production through Zedi Access. This migration that was fully accomplished without Zedi engineers needing to set foot on any site.

The company is very happy with their results, and now able to focus their energies on their core business of oil production and not worrying about trying to figure out how to get the answers they need each day; they have them all set up on their dashboards and ready at the click of a button.
